

Touchscreen Controller for Wanco Variable Message Signs

Create and select messages, configure settings and more

Designed for users of Wanco® variable message signs, our new touchscreen provides access to all the functions of our standard interface, widely known as the industry's easiest to use.

- Easy-to-use, intuitive screens
- Touch-sensitive screen with big buttons
- Works with any Wanco message sign*
- Built-in password protection
- NTCIP compliant

A bright 7-inch screen with big buttons and an intuitive interface make the Wanco touchscreen controller easy to use.

From the very first screen, our new controller displays the message currently on the sign. Then, you can easily choose a new message from a hundred preprogrammed messages stored in memory (1), or create and edit up to 150 custom messages (2). But our touchscreen controller does more than let you manage messages. Use it for configuring sign settings, message schedules, power usage, sign brightness and much, much more.

The Wanco controller is easy to see in bright light, is weatherproof for use in adverse conditions, and has a night mode (3). Password protection is built in, to restrict access to authorized users, and of course the controller and our message signs are fully NTCIP compliant.

To see or place an order for our new touchscreen controller, call **800.972.0755** or visit **wanco.com**.

*Message sign must have a Linux-type control board.
